### GENERATOR SERVICE CONTRACT

JULY 1, 2024 TO JUNE 30, 2025

This service agreement is entered into by HB Energy Solutions and the generator owner for the purpose of maintaining their standby generator and associated equipment in the best possible operating condition. The service provided under this contract is a two-part service as outlined below. The contract does not relieve the owner of periodical checks and testing as described in the manufacturer's manual.

- **PART ONE SERVICE INCLUDES:** One year after install or previous tune-up, we will schedule a complete tune up. The tune up under service contract includes labor and material necessary for regular maintenance to change oil and oil filter. We will clean air filter and check spark plug or provide and replace as needed. Also, the technician will check for oil leaks, check the exhaust system, check voltage and frequency and overall condition of generator. The technician will provide an inspection report and make recommendations if any additional work is necessary. If additional work is necessary; the office will provide the customer proposal for the repairs for approval unless the customer has already authorized the technician to complete at regular rates.
- **PART TWO SERVICE INCLUDES:** Approximately six months later, we will schedule a routine inspection to check the performance of the generator, inspect overall conditions and track running time hours (if unit has a timer). As done in the annual tune-up, the technician will provide an inspection report with recommendations if any and the office will follow up with the customer.
- **FEE:** Three Hundred Ninety-Nine Dollars. \$399.00
