Cold Weather Has Arrived!

We are dedicated to providing our customers with the services and products necessary to keep safe and warm this winter. With temperatures dipping below zero, your heating system will burn more fuel to keep your home warm. Our automatic delivery customers can rest assured our staff is closely monitoring your usage to be certain you don't run out of fuel. If you receive fuel on a will-call basis, check your tank levels often and call when the gauge reads $\frac{1}{4}$ of a tank to schedule a delivery. Better yet, eliminate the worry by becoming an automatic delivery customer.

Cumberland Pellet Stove

\$1999 plus installation through the month of February

Although winter has arrived, there are still many cold days to come. This month we are featuring the Cumberland pellet stove by Ardisam. This American made stove is a powerful heater, and it is easy to operate. The Cumberland has many safety features that make it a worry free way to add warmth and atmosphere to your home or business.

Features and Benefits

- Thermostat controlled
- Easy to use and clean
- Burns multiple fuels
- Auto-ignition
- Patented heat exchanger
- 24 different burn settings

Service Spotlight

Installation of Generac or Kohler Generator

The installation of a whole house standby generator provides you with peace of mind in the event of a power outage. We are your one-stop-shop for generator installation. We install the generator. We wire it to the house. We install the propane tank and gas lines. We fill the propane tank. If you already have a standby generator, we can perform an annual tune-up to make sure it is working when you need it most.

COLD WEATHER TIPS

Keep your pipes from freezing this winter by following a few simple steps

Open Cabinet Doors

The cabinets in your bathroom and kitchen can prevent warm air from reaching the pipes in your outside walls or those housed within the cabinets. By leaving these cabinet doors open, you allow the warm air to circulate into these areas.

Run Faucets

In extreme cold weather, run your faucets every so often to help keep pipes from freezing. Running water is less likely to freeze than water standing in a pipe. Even a small trickle is enough. The hot water lines are used less frequently than the cold water lines that are called upon to fill up a drinking glass, brush ones teeth, or flush a toilet. Remember to run the hot water, too.

Going Away?

Are you planning to get away from the cold altogether this winter? If you decide to go away for an extended period of time, make sure to protect your home. If you want to save on your heating bills by turning down the thermostat, set it no lower than 55°. You should also consider having us completely drain and winterize your home. We can install a dial out alarm that can be programmed to alert you via telephone in the event your power goes out or the temperature drops below a certain point.

What if my pipes do freeze?

If you turn on your faucet and no water runs, it is possible the pipes in your home have frozen. Open all faucets to help relieve any excess pressure that could build up between the faucet and an ice blockage. Turn off the main water valve and then give us a call. It is best to let our experts safely thaw the pipes and make any necessary repairs. Our emergency service is available 24 hours a day.

Springfield Net Metering Solar Facility Update

Last month we shared with you the exciting news that Springfield Net Metering had come online. The solar energy production facility is located at our newly expanded energy campus in Springfield, VT. The system harnesses

energy from the sun to produce electricity and then sends it back to the grid. We are pleased to report that the system is working beautifully and has exceeded our expectations. December and January proved to be great months for solar!
